Read the Room

Paste a confusing message. See what they *really* mean.

Built by Dariush

THE PROBLEM

Some messages cost you a whole evening of overthinking.

"ok." "fine, do whatever." a passive-aggressive email. For neurodivergent people and anyone with social anxiety, reading tone isn't automatic — and getting it wrong has real stakes.

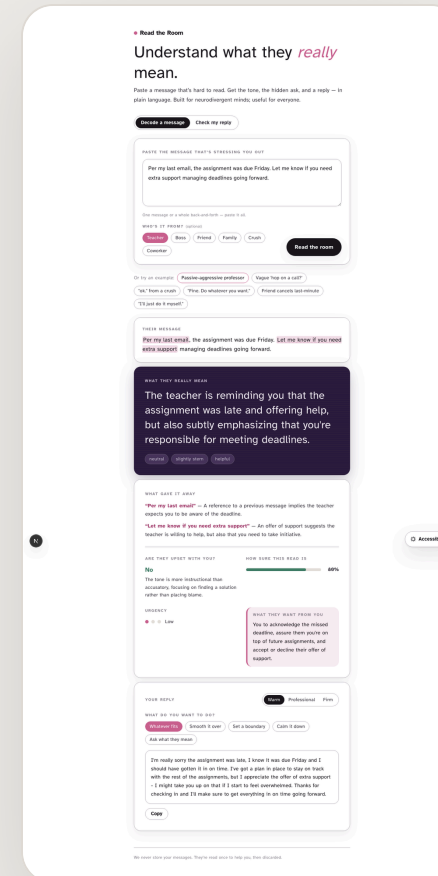

THE IDEA

See *through* a message to what they actually meant.

The calm surface is what they said. The reveal underneath is what they meant — the real meaning, the tone, whether they're upset with you, and what to say back.

It reads between the lines.

- What they **really mean**, in plain words
- The exact **words that gave it away**, highlighted
- Upset with you? · what they want · urgency · confidence

DEMO · REPLY + CHECK

• Read the Room

Understand what they *really* mean.

Paste a message that's hard to read. Get the tone, the hidden ask, and a reply — in plain language. Built for neurodivergent minds; useful for everyone.

Decode a message Check my reply

PASTE THE REPLY YOU'RE ABOUT TO SEND

k, whatever works.

WHO ARE YOU REPLYING TO? (optional)

Teacher Boss Friend Family Crush

Coworker Check how it lands

Showing a second example (demo audio mode) — no network needed.

HOW THIS WILL LAND

This comes across as clear and direct — the other person will understand exactly what you mean. Depending on your history, the directness could read as slightly cool.

IT COULD BE MISREAD AS

- Without a softening word, a sensitive reader might take it as a little curt.
- If they were hoping for warmth, the brevity could feel distant.

A WARMER WAY TO SAY IT

Hey — just wanted to be upfront about where I'm at on this. No pressure at all, and I'm happy to talk it through whenever works for you!

Copy this

We never store your messages. They're read once to help you, then discarded.

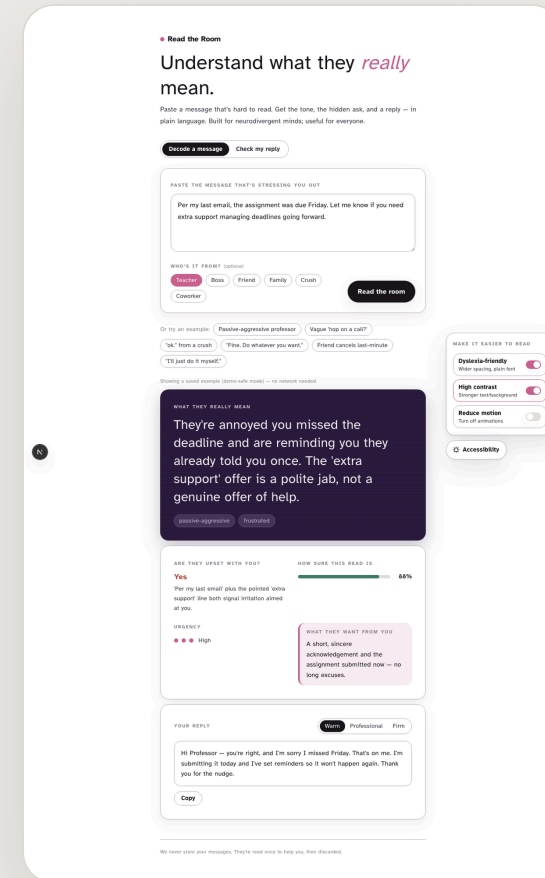

It writes the reply — and checks yours.

- Three tones (warm / professional / firm), streamed
- Pick your goal: apologize · set a boundary · de-escalate
- **Check my reply** — how it lands + a warmer rewrite

BUILT TO BE READ · THIS IS THE POINT

Made for neurodivergent minds first.

- Set in **Atkinson Hyperlegible**, drawn for legibility
- One tap: dyslexia spacing · high contrast · reduced motion
- Never color-alone. No streaks, no scores, no judgment
- A gentle **crisis safety net** when a message is heavy

THE PROMISE

Your messages are yours. We never store them.

Read once to help you, then discarded. No account, no history, nothing kept on a server — and the server never logs your messages.

One adapter, three brains.

Groq — free, live

Claude — best quality

Demo-safe — offline

- Swap the model with one env var, zero app-code change
- Strict JSON (Zod) + a crash-proof tolerant parser
- **The demo physically can't fail** — offline canned mode if the wifi dies
- Works as a **browser extension** too — decode text on any page

WHY IT MATTERS

A tool you can use tomorrow — built first for the people the internet forgets.

It turns a moment of anxiety into a moment of understanding.
That's the whole job.
