Read the Room

Paste a confusing message. See what they *really* mean.

Built by Dariush

THE PROBLEM

Some messages cost you a whole evening of overthinking.

"ok." "fine, do whatever." a passive-aggressive email. For neurodivergent people and anyone with social anxiety, reading tone isn't automatic, and getting it wrong has real stakes.

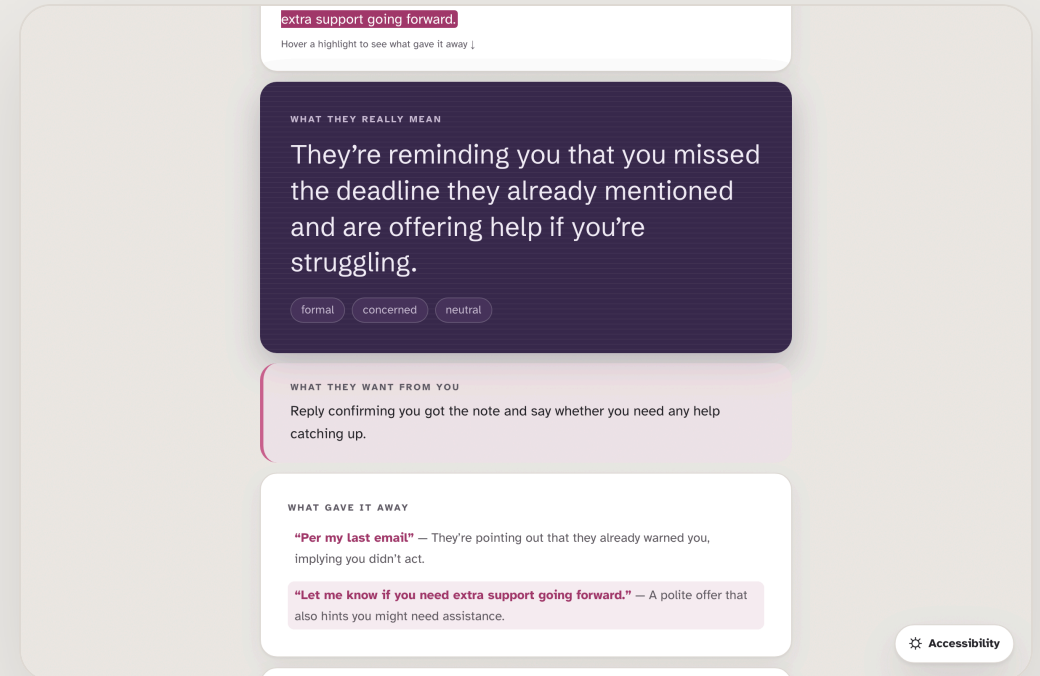

THE IDEA

See *through* a message to what they actually meant.

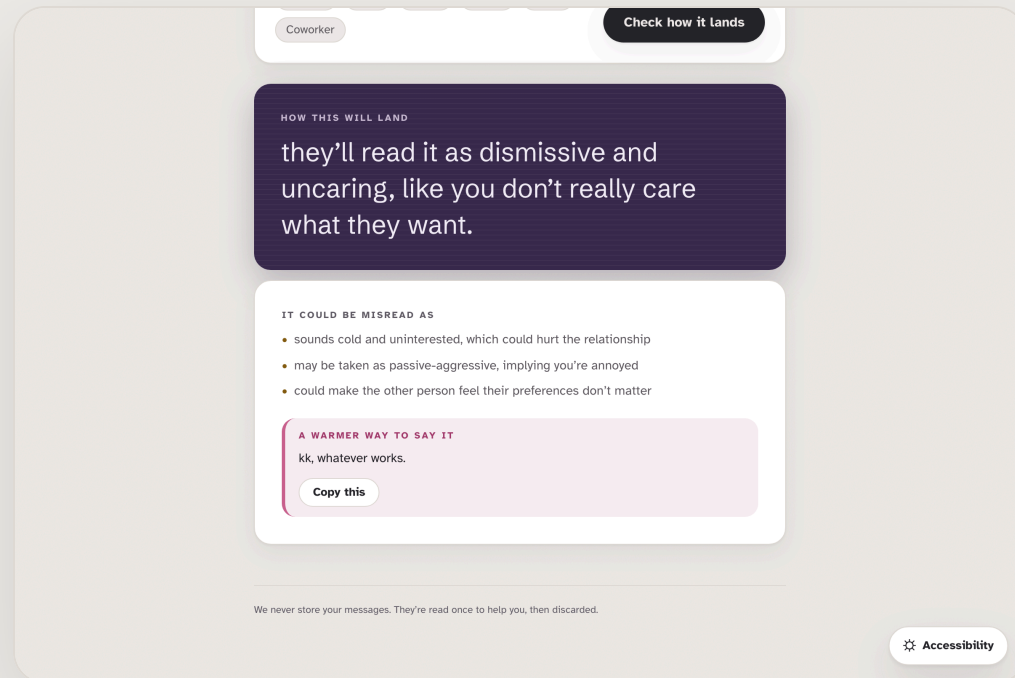

The calm surface is what they said. The reveal underneath is what they meant: the real meaning, the tone, whether they're upset with you, and what to say back.

It reads between the lines.

- What they **really mean**, in plain words
- The exact **words that gave it away**, highlighted
- Upset with you? · what they want · urgency · confidence

DEMO · REPLY + CHECK

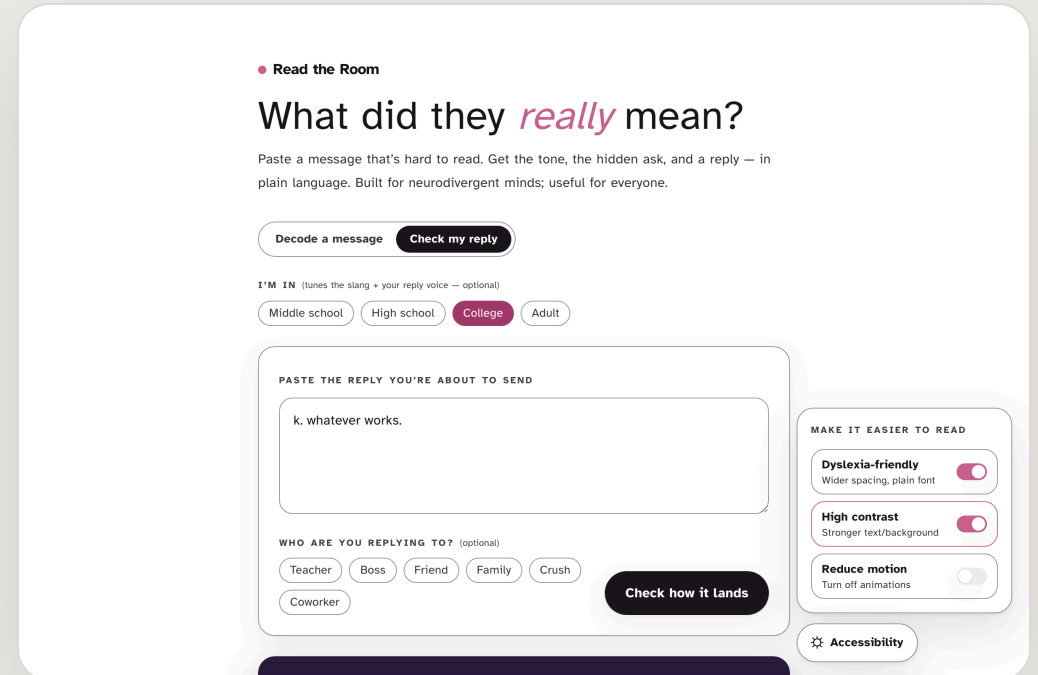

It writes the reply, and checks yours.

- Three tones (warm / professional / firm), streamed
- Pick your goal: apologize · set a boundary · de-escalate
- **Check my reply:** how it lands plus a warmer rewrite

BUILT TO BE READ · THIS IS THE POINT

Made for neurodivergent minds first.

- Set in **Atkinson Hyperlegible**, drawn for legibility
- One tap: dyslexia spacing · high contrast · reduced motion
- Never color-alone. No streaks, no scores, no judgment
- A gentle **crisis safety net** when a message is heavy

THE PROMISE

Your messages are yours. We never store them.

Read once to help you, then discarded. No account, no history, nothing kept on a server, and the server never logs your messages.

One adapter, a chain of brains.

Cerebras · primary

Groq · fallback

Demo-safe · offline

- A capped or slow provider rolls to the next, automatically
- Strict JSON (Zod) plus a crash-proof tolerant parser
- **The live demo can't dead-end:** an offline canned mode is the last resort
- Works as a **browser extension** too, decode text on any page

WHY IT MATTERS

A tool you can use tomorrow, built first for the people the internet forgets.

It turns a moment of anxiety into a moment of understanding.
That's the whole job.

● READ THE ROOM

What they really mean.

Try it · <https://read-the-room-phi.vercel.app> · Next: more languages, saved tones, the extension everywhere.
